## TODO:

Need an algorithm to recommend similar profiles in the home feed

- Based on top 3 foods AND
- Uploaded DoorDash history

Need tinder swiping functionality

- Albert and Saathvik get on it

# Notes

- Make a social media / friend finding oriented app instead of food orders
- We can get acquired by Doordash or other companies for lots of money
- Algorithm that suggests profiles based on Doordash order history
- Advertise it as AI so it sounds cool and marketable (it learns from the swipes)
- People can swipe left or right on suggested profiles with similar palates (like Tinder)
- Add the snapchat pull-lever function to reset the matches
- Upload food ordering history data into app and it will match you with people with similar tastes
- You guys can connect if swiping right and chat with each other about dishes in the area and ask them what they get at certain places and stuff
- You can also add your own friends in the search
- A standard “profile” on the app should contain a name, a photo (if they want), a list of top 3 dishes (and the places they get them from), and a brief bio, and added posts.
- Add ads to the app at the bottom or top (like a banner)

# Tasks

1. Account settings and personal information
2. Main screen for scrolling / swiping profiles
3. Messages and add friends feature / social
4. Algorithm that suggests profiles <- Doordash
5. User login and database information storage
6. Publishing app and running website / info storage
7. Media and marketing (Doordash?)
8. Networking (Contacting Potential Acquirers)
